Langflow

Challenge #2

Challenge Overview

Objective

Create a question-answering system based on the attached book, using the RAG methodology.

The system should be capable of answering questions about the book's content accurately and relevantly.

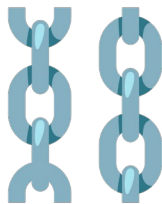

Requirements

Input: A question about the content of the given book.

Output: An answer generated by the system.

Components: Any choice, as long as it includes a chat input, single chat output, and the Langwatch Evaluator component.

Evaluation

Evaluation will be conducted using Langwatch and the metrics RAGAS Answer Correctness.
